**Risk and reward profile**

The risk and reward category was calculated using historical performance data and it may not be a reliable indicator of the Sub-Fund's future risk profile.

Due to a lack of sufficient historical data, the risk indicator incorporates simulated data from a benchmark portfolio. Risk Category 3 reflects limited potential gains and/or losses for the portfolio. This is due to investments in bonds and/or equities on US and European markets.

The risk and reward category shown is not guaranteed to remain unchanged and the categorisation may shift over time. The lowest category does not mean a risk-free investment.

- **Currency Risk** - Changes in exchange rates between currencies or the conversion from one currency to another may cause the value of investments in the Sub-Fund to diminish or increase.
- **Credit Risk** - The Sub-Fund may be invested in securities whose credit rating may decline, meaning there is a risk that the issuer may not be able to meet its commitments. Should an issuer's creditworthiness decline, the value of the bonds or derivatives linked to the issuer may fall.
- **Financial, economic and political risks** - Financial instruments are impacted by various factors, of which, without being exhaustive, the development of the financial market, the economic development of issuers who are themselves affected by the general world economic situation as well as economic and political conditions prevailing in each country.
- **Interest rate risk** - An increase in interest rates may cause the value of fixed-income securities held by the Fund to decline. Bond prices and yields have an inverse relationship, when the price of a bond falls the yield rises.

- **Liquidity Risk** - The markets for some securities and instruments may have limited liquidity. This limited liquidity could be a disadvantage to the Sub-Fund, both in the realisation of the prices which are quoted and in the execution of orders of orders at desired prices.
