

March Cartera Conservadora, F.I. is a fund aimed at investors with a conservative risk profile who can tolerate a certain degree of exposure to equities. Exposure to equities is capped at 30% and is undertaken via global equity funds, while the rest of the portfolio is invested in global bond and absolute return funds. The fund seeks to keep volatility under 5% and maximise returns.

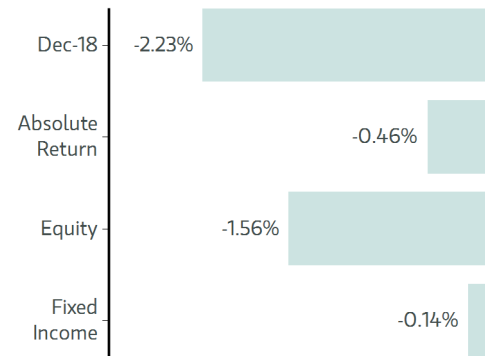

Monthly Commentary

The end of the year has come with greater uncertainty around Brexit, the rise of tension in the trade war between China and the United States and a shift of bias in the message of the Federal Reserve. Factors which together have ballasted the markets, mainly the equities, whilst the agreement on the Italian budget or the arraignment to resume trade talks in January by the Trump administration and the giant Asian have not been able to serve as balance. The Brent dropped an 8.3%, up to 53,8\$/barrel, standing at minima of 15 moths. The resolution of the Italian conflict entailed slight gains for the single currency, although, year to date, it sagged a 5%. The equity maintained its pessimistic tone and, likewise, S&P had a drop of 9.2%. The annual balance was very unfavourable: big drops for Europe, closing the worst year of the decade and with US indexes also retreating.

The portfolio returned -2.23% in December, with losses standing at -6.63% YTD. Investments in relative value funds and alternative strategies contributed a combined -0.46% to the portfolio, whilst the equity component added -1.56% and the fixed income component contributed -0.14%. The various strategies the fund invests in take on a range of currency risks, as some strategies are managed in currencies other than the euro.

Very negative behavior of the markets, which has had a direct impact on the profitability of the portfolio with drops in some of the cases of more than a 10%, like the case with the strategy of small American companies of Alger. Also asset allocation or those of relative value strategies have also been affected by this bad behavior of the equity markets, where only the strategies Start of EdR and Merian Global Equity Absolute Return end the month in positive. In terms of the components of income fixed disparate behavior, with the strategy Dynamic Bonds of Jupiter, accumulating a rise on the month of 1.29% which does not alleviate the bad behavior of the credit and convertible bonds.

Return 1 month per asset class

The monthly contribution of each category is calculated as the 1-month return in EUR of each underlying fund weighted by category as at 12/31/2018

Risk / Return Ratio

Return last month	-2.23 %
Return 3 months	-5.40 %
Accumulated Return 2018	-6.63 %
Return 1 year	-6.63 %
Return 3 years	-2.20 %
Volatility 1 year	2.94 %
VaR at 99%	0.57 %
Maximum Drawdown	-8.03 %
