Macroeconomic and Market Overview

The second quarter of 2019 has been once again influenced by the commercial tension between China and the United States. China's answer to the last measures adopted against Huawei has not been as soft as last scenarios: the constraint in "rare earth" mineral exports, where China produces the 70% of the world's total and that are used almost in every current technological applications since it a tool of additional pressure in comparison to other cutting options more conventional. The generated mood with regards to global markets as a result of this situation has been the trigger of the turmoil increase and strong correction episodes.

Within this increasing tension context it is very important to highlight the resilience of the global growth. The economic strength of emerging markets has permitted that the lesser potential growth of the developed economies does not affect the global data, that remains stable around the 3.50% throughout this year. We expect a more stable macro scenario throughout the second half of 2019, therefore, we will progressively increase, taking advantage of market movements, the exposure to global markets as a diversification instrument.

After a negative may, the global markets have recover field again, with indexes such as the S&P 500 that are back to historical maxima area. Other than the industrial sector, it is worth highlighting that consumption shows a more solid fundamentals: the solid continuous employment creation and salary raises progresses at a reasonable pace. In this context, we believe that the current data does not show indicators of an imminent recession: the published economic data and, specially, the early businesses confidence indicator forecasts that the economic deceleration moves forward.

Monthly Portfolio Commentary

The portfolio returned +0.52% in June with return standing at 2.41% YTD.

Investments in relative value funds and alternative strategies contributed a combined 0.14% to the portfolio, whilst the equity component added 0.07% and the fixed income component contributed 0.28%. The various strategies the fund invests in take on a range of currency risks, as some strategies are managed in currencies other than the Euro. To avoid additional portfolio volatility, we hedge against this risk to a large degree.

The good performance of the different markets has been reflected in our portfolio, where almost all the strategies have contributed return. Torrenova is the main return contributor of the portfolio, after the increase of more than 1% during this month, although the strategy that has shown the best performance is Family Businesses', with a return of more than 4.5% in the month. Among the absolute return strategies, Gaia Egerton with an increase of 3.6% and Nordea's Alpha 7 with an increase of 1.2% are those that show better performance, where the negative grade is Neuberger's Uncorrelated Strategy, which loses a -1.8% , almost exclusively due to the exchange rate.

In June we have carried out slight adjustments to the portfolio, maintaining the diversification by strategies of previous months. Within the fixed income portfolio we have carried out small partial sells taking advantage of the good performance of BNYM's Global Dynamic Bond and Jupiter's Dynamic Bond strategies. In the case of the equity portfolio we have replaced the spanish equity strategy of Valores Iberian Equity with that of Alger's Medium Cap American Companies. We have also slightly increased exposure to K2's Alternative Strategies.

Annex

Description of the invested funds	
ALGER SMALL CAP FOCUS I USD	US equity fund managed by Alger, an asset manager founded in 1964 and one of the pioneers of growth-style management. The fund manager, supported by her team of analysts, invests primarily in small caps with robust growth potential, using a strategy that seeks to generate returns by identifying companies undergoing a positive change in dynamics, which are in the early stages of their cash generation potential and which enjoy a strong competitive edge and high financial quality. With an investment horizon of over three years, which means low portfolio turnover and therefore lower costs, the fund seeks to double the initial investment made in any given name.
BLACKROCK STR EMK FX DYN I2U	Actively managed and not constrained by a benchmark, this fund invests mainly in bonds issued by emerging market governments, public agencies and corporates, both in local and hard currencies (USD, EUR).
BLACKSTONE DIVERS MSI EUR ACC	Multi-strategy fund with an investment philosophy that stems from the management team's top-down view, which is based on a range of macro scenarios and implemented through various management teams, enhancing the fund's inherent diversification.
BLUEBAY GL SOV OPP IUSDPC	The Bluebay team, a specialised fixed income manager, directly manages this macro global strategy by investing in a portfolio of interest rates, currencies and sovereign debt in developed and emerging markets at a global scale. The strategy moves top-down macroeconomic visions into a selection of individual assets by implementing a combination of relative value directional tactics and tactical positioning, with a strong emphasis on liquidity. The global scope of the strategy and its broad guidelines provide the flexibility to direct the exposure in an opportunistic way to different assets and instruments and permits minimising the risk of slumps during market stress periods.
BNYM GL DYNAMIC BOND W USD	The fund aims to outperform inflation +2% over 5 years through an active management of fixed income investments, including sovereign debt and credit. It can invest in both high-rated issuances and HY. The fund actively manages duration, yield curve positioning and currency exposure, and seeks to generate returns through various strategies.
CANDRIAM LONG SHORT CREDIT VCE	Absolute return strategy which seeks to harness investment opportunities in the credit markets, using arbitrage and directional strategies (both on purchases and sales) on corporate bonds and credit derivatives. It covers a broad investment universe of high grade and high yield assets, and is geographically diversified across Europe, North America and Japan.
CANDRIAM RISK ARBITRAGE-I	Event Driven strategy (restructuring or merger processes, liquidations or bankruptcies that can cause inefficiencies in the share prices) which present a low correlation with the market, not depending exclusively on the behavior of it. The team invests in officially announced events, which limits the risk of the operation, mainly in the European and North American markets. Its objective is to outperform Eonia in an investment horizon of 18 months, with a low volatility less than 5%.
DEU FLOATING RATE NOTES-IC	Global fixed-income strategy that invests in EUR floating bonds with investment grade rating to take advantage of the possible rates hike and the curves normalisation in Europe. We deem it as an alternative to liquidity, with a return-risk profile higher, but maintains a very low volatility and with no rates risk.
EDR FUND-EMERG BONDS I EUR	The fund aims to beat the returns offered by all emerging countries' fixed income markets through a high conviction, discretionary management. Unconstrained by region, the fund can invest in Latin America, Africa, the Middle East, Asia and Eastern Europe, mainly in bonds and money market instruments, with no constraints in terms of rating. In extreme market conditions, the fund can hedge all or some of its positions using derivatives.
EDR START-S	Multi-strategy fund with a low risk profile in which the management team's global outlook is implemented by bringing together the top investment bets of Rothschild's own teams in accordance with the risk budgets allocated to each of them.

Annex

Description of the invested funds	
ESPERIA FD CORP BOND E I	The fund offers exposure to the eurozone credit market, investing in both sovereign and corporate debt in accordance with the principle of risk diversification. Issuers must be rated at least BBB- or equivalent. Exposure to convertible bonds may not exceed 10% of the fund's assets.
ESPERIA SYSTEMATIC DV I	Systematic investment strategy targeting a broad range of uncorrelated equity and fixed income assets which seeks capital appreciation over the medium term, responding flexibly to market trends. The portfolio is constructed via a similar risk allocation for each of the components of the portfolio.
EVLII SHORT CORP BOND IB EUR	This fund invests in European short-maturity corporate bonds and is sector and rating unconstrained. The team selects issuers based on its own credit research, coupling the analysis of the issuers' fundamentals with its own in-house valuations. The fund has historically had significant exposure to the Nordic markets.
FONMARCH FI C	Actively managed Euro-denominated bond fund with a duration range of 1 to 4 years. The fund seeks to identify the best opportunities in the fixed income universe - sovereign debt, credit and money market instruments - with very low currency risk (only 5% of the portfolio can be held in currencies other than EUR).
FRANKLIN K2 ALT ST-IPFAEH1	Absolute return strategy that by means of the compound in different type of assets seeks to moderate the volatility, decreasing the asymmetries drops risks and obtaining yields adjusted by risk that are reasonable. The investment is carried out through four main strategies (relative value in equity, arbitrage in fixed income, corporate events and macroeconomic approach).
JUPITER JGF DY B FD I EUR A	The fund will invest mainly in high-yielding assets, including investment grade bonds, sovereign debt and convertible bonds. The fund's managers can use derivatives, but only for hedging purposes. Investments are identified based on a combination of macroeconomic analysis and careful asset selection. The fund's main strategy is to seek intrinsic value opportunities and risk-return asymmetries in bonds.
MAN GLG PAN EU EQ GR IFCEUR	Long-term European equity strategy focused on 30-40 companies of any capitalization that focuses its investment on two main themes: consolidated leaders within their sectors and those with great growth potential that can become the winners of the future. The management is done without considering the benchmark, highlighting the search to create a portfolio of scalable companies, fundamentally selected and of high conviction. The core of the process of selecting companies is the multiple preservation of capital, mainly looking for companies in which a reduction of estimates is unlikely more than those that will improve their estimates and in which profits and cash flows play a role. determinant.
MARCH EUROPA C	The fund invests in European companies trading on European markets, regardless of market cap. Asset selection focuses on quality companies with compelling valuations, strong fundamentals and features that set them apart from the competition; essentially, good investment opportunities. The fund does not track an index, but its performance is measured against the DJ Stoxx 50.
MARCH GLOBAL C	An actively managed, stock picking global equities fund based on our value investing model which aims to identify good companies with upside potential over the long term. We focus on picking quality names with attractive valuations, strong fundamentals and features which sets them apart from the competition (added value, distinctive attributes etc.); essentially, good investment opportunities.

Annex

Description of the invested funds	
MARCH INTL-FAMILY BUSINESSES I EUR	This fund invests in family-owned companies listed worldwide. The intrinsic value of family-owned companies (long-term approach, loyalty, motivation, low leverage ratios, etc.) mean they tend to outperform during economic downturns, a characteristic we are keen to harness for our fund. Grupo March's experience as a family-owned company with a long, successful investment track record backs up this theory.
MARCH INTL-TORRENOVA LUX I EUR	The fund follows a traditional global asset allocation absolute return strategy and targets a return of eurozone inflation +2% with volatility below 6%. The management model is flexible (equity exposure can range from 10% to 40%) and global (unconstrained by region, sector or financial instrument). The risk level depends on the degree of exposure to equities, which is defined over a medium to long-term investment horizon.
MARCH PATRIMONIO CORTO PLAZO C	Conservative fund investing in short-dated eurozone fixed income instruments with an average duration of under 6 months. The fund's management focuses on identifying the best opportunities in the euro denominated bond universe with broad diversification in terms of asset type: treasury bills and bonds, term deposits, commercial paper, mortgage-covered bonds, bank-guaranteed debt and credit.
MARCH PREMIER RENTA FIJA CP C	Conservative fund investing in short-dated eurozone fixed income instruments with an average duration of under 6 months. The fund's management focuses on identifying the best opportunities in the euro denominated bond universe with broad diversification in terms of asset type: treasury bills and bonds, term deposits, commercial paper, mortgage-covered bonds, bank-guaranteed debt and credit.
MERIAN GBL EQ ABRET I EUR AC	The fund targets capital appreciation with very strict risk control, investing in equities which show a low correlation to both the equity and fixed income markets.
MORGAN ST INV F-GLB BRNDS-Z	Global equity fund which invests in quality companies with strong, sustainable returns on invested capital and no leveraging, which offer stable growth and are highly profitable over the long term. It seeks companies whose management teams are focused on maintaining these growth levels and reinvest a substantial amount of the company's capital. It also looks for companies with a dominant market position which protect the strength of their brand and have pricing power. Finally, the fund invests in companies which remunerate shareholders but also reinvest in innovation and advertising and avoid acquisition-based (inorganic) growth.
MUZIN-ENHANCEDYIELD ST EUR ACC	The fund aims to preserve capital and generate attractive returns that outperform the yields offered by short-term government bonds by investing in a diversified portfolio comprised mainly of short-term corporate bonds. These bonds are issued predominantly in USD and European currencies and traded on official markets. The portfolio's average rating is investment grade, but it can invest up to 40% in high yield.
NB UNCORRELATED STRAT IUSDA	Absolute return strategy with profitability objective to obtain an extra 5% on liquidity with a volatility of around 7%. In addition, this objective is achieved with a zero to medium term correlation with both variable income and credit markets or with interest rates. The team has four managers and nine analysts, who are in charge of coordinating and supervising the strategic weightings, allocations and reimbursements in the different management teams in which they invest and compliance with the guidelines, the latter also supervised by the independent risk management function.

Annex

Description of the invested funds

NORDEA LOW DUR EUR C-BI EUR	Fixed income strategy which invests in the covered bond market. These fixed income instruments offer dual protection (via the issuer and via the underlying collateral) and enjoy special treatment under European Union regulations, which affords it a similar level to sovereign debt. Portfolio duration is also kept to one year to minimise the impact of possible rate hikes. The team's investment philosophy is based on the conviction that covered bond markets are inefficient and so active management can add value. These inefficiencies include new issuers which pay a premium to attract investors and the impact of rating-based methodologies, which exclude certain issuers. The investment team is able to exploit these inefficiencies thanks to its more than 18 years' experience managing this asset class.
SCHRODER GAIA EGERTON - C (EUR ACC)	The strategy targets capital appreciation by investing in equities or equivalent instruments from all global markets, including EM, either directly or through derivative financial instruments. The funds invests in a selected portfolio of assets with the best future growth potential. It may also invest in assets unrelated to equities. Prudent liquidity levels will be held when deemed appropriate. The liquidity position can be significant and even account for 100% of the fund's assets under exceptional circumstances.
THREADNEEDLE-GL E MKT ST-ZEH	The fund takes an active management approach to harness market inefficiencies through a combination of macro and micro insights and appropriate risk allocation, investing in both hard and local currency-denominated sovereign debt and credit, and keeping portfolio duration low. The technical factors taken into account when investing in bond issuances are the size and volume of the transaction, as well as how representative it is of the investment universe and the positioning on the rate curve.
UBAM AB RET L VOL FX INC- IPE	Balanced-profile fixed income strategy of profitability-risk throughout macroeconomic and market cycles, using a top-down allocation process in all global fixed income markets. The fund is designed to potentially benefit from a rising interest rate environment and the investment target is to provide investors with positive returns even at hiking interest rates. The exposure in terms of assets, without constraints due to Benchmark and with bias to the search for liquidity, allows a proactive allocation to the most attractive market segments. Asset allocation and portfolio construction are closely controlled by the risk, to minimise the decrease and mitigate volatility.
