

Target: maximum volatility (not guaranteed) less than 5% per annum. Diversified portfolio between fixed income investment funds, absolute return and equities (maximum exposure to equities: 30%). Your investment decision-making process takes ESG criteria into account.

Monthly Commentary

The reopening of China, which is starting to lose steam, and the fall in energy prices in Europe have delayed the onset of a recession that nevertheless seems more inevitable despite the resilience shown by the consumer (especially in the US).

According to our calculations, official rates on both sides of the Atlantic are already in restrictive territory for economic expansion (from November 2022 in the US and from March in the Eurozone).

We envisage three possible scenarios between now and the end of the year that would follow this order of probability of occurrence:

1. The labour market weakens after one of the most aggressive rate hike cycles in the last 40 years, pushing up the unemployment rate and ultimately leading to a recession that would a priori be mild in nature.
2. Growth could be resilient and even continue to surprise on the upside (as, for example, the latest surveys of activity in the industrial and services sectors have done).
3. The most favourable context for investors, but at the same time the most improbable, would be a continuation of the de-escalation in price indices that would avoid an economic contraction.

In May, the performance of its portfolio stood at 0.04% compared to 1.88% for its benchmark. For the full year 2023, the cumulative total return is 3.04% versus 3.03% for the benchmark. The portfolio maintains a defensive bias.

63.96% of the portfolio is classified as an article 8 or 9 asset under Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability disclosures in the financial services sector

Monthly Return per Asset

Contributions of each category throughout the month, calculated like the 1 month EUR return of each underlying fund by category pondered with the weight as of: 31/05/2023

Risk/Return Ratio

Last month return	0,04%
3 months return	2,22%
Accumulated return 2023	3,04%
1 year return	-0,10%
3 years return	1,79%
1 year volatility	3,41%
VaR at 99%	0,47%
Maximum drawdown	-12,60%
