

Target: maximum volatility (not guaranteed) less than 5% per annum. Diversified portfolio between fixed income investment funds, absolute return and equities (maximum exposure to equities: 30%). Your investment decision-making process takes ESG criteria into account.

Monthly Commentary

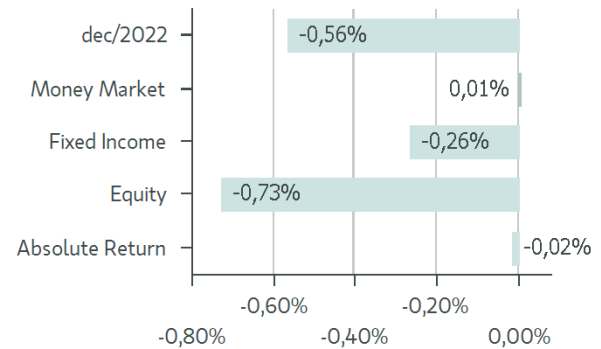

After a year of resilient economic growth, we believe that activity will eventually struggle in the coming quarters due to tighter financial conditions and higher energy prices. World GDP growth will remain at +1.5%, a level that represents less than half the average growth rate of the last 40 years. On the inflation side, although we have seen the ceiling, the path to normalisation will not be fast

The performance of its portfolio stood at -0.56% in December compared to -3.84% for its benchmark. The cumulative return for the year 2022 is -8.81% compared to -10.46% for its benchmark.

76.78% of the portfolio is already classified as article 8 or 9 according to the Disclosure Regulation (SDFR) and the Sustainability Weighted Promotional Ratio stands at 60.03%.

When investing in the different strategies we are taking on different currency risks. To avoid adding volatility to the portfolio, the decision is made to hedge, to a large extent, the currency risk. This investment policy that we maintain in the portfolio in relation to hedging currency risk (mainly the dollar) explains to a large extent the negative differential we maintain with the benchmark index.

Monthly Return per Asset

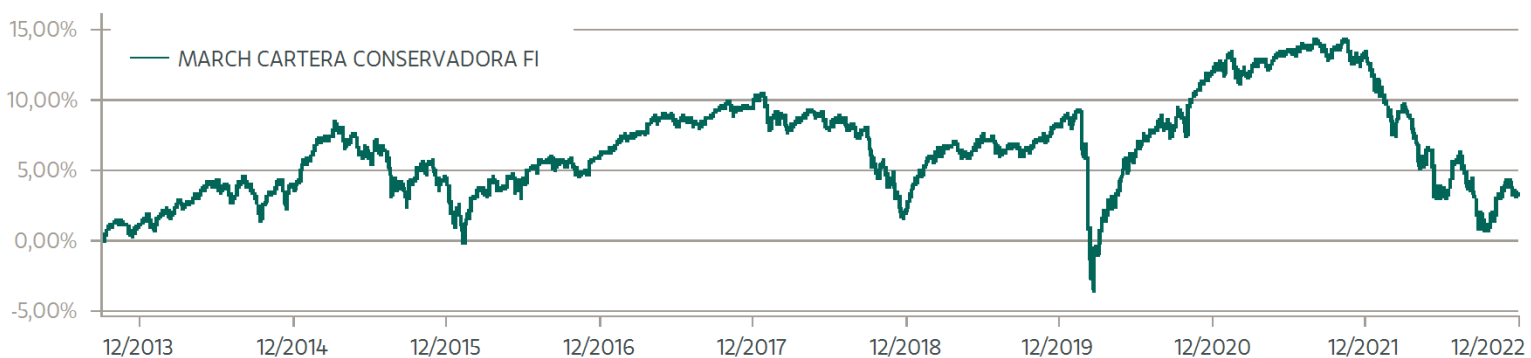

Contributions of each category throughout the month, calculated like the 1 month EUR return of each underlying fund by category pondered with the weight as of 31/12/2022

Risk/Return Ratio

Last month return	-0,56%
3 months return	2,40%
Accumulated return 2022	-8,81%
1 year return	-8,81%
3 years return	-4,45%
1 year volatility	4,23%
VaR at 99%	0,62%
Maximum drawdown	-12,60%
