

March Cartera Moderada, F.I. The fund's main objective is to invest in a basket of funds with a medium-term horizon (three years), combining fixed income and equity assets to obtain greater returns with a moderate risk level. The strategy has a moderate degree of tolerance for stock market volatility. The maximum invested in global equity funds is 60% of the portfolio. Maximum annual volatility is 6%.

Monthly Commentary

Global vaccination rates continue, allowing mobility to increase with particular intensity in the areas where the process is most advanced (especially the United States and the United Kingdom). As the processes progress and herd immunity is achieved, the global economy will accelerate into the recovery phase, aiming to reach estimates of above 6%.

Recent confidence data in the United States as well as GDP data in China fuel this optimism. In addition, although in Europe this improvement is slower and while the first quarter figures continue to be weighed down by mobility restrictions, we expect the recovery to accelerate and to be duly underpinned by the EU support that should start to arrive in the third quarter of the year.

We continue to believe that maintaining exposure to equities and risk assets at current levels is the best way to position ourselves for this initial phase of the cycle, seeking to take advantage of corrections to increase the cyclical exposure of portfolios. Among the fixed income components, we remain cautious with government bonds and duration.

The yield of its portfolio stood at +0.28% in July, with the yield standing at 3.24% YTD.

Investment in relative value funds and alternative strategies has jointly contributed 0.19%, while the contribution to its equity investment portfolio was 0.06%, and 0.16% to fixed income. When investing in different strategies, we are taking on different Forex risks because some strategies are managed in currencies other than EUR. To avoid adding volatility to the portfolio, we have decided to largely hedge the Forex risk.

In July, we reduced the duration of the portfolio, adjusting some of the positions we hold, and increased the aggregate liquidity to around 4%.

Monthly Return per Asset

Contributions of each category throughout the month, calculated like the 1 month EUR return of each underlying fund by category pondered with the weight as of: 30/07/2021

Risk/Return Ratio

Last month return	0,87%
3 months return	2,59%
Accumulated return 2021	3,24%
1 year return	10,66%
3 years return	10,77%
1 year volatility	4,48%
VaR at 99%	0,66%
Maximum drawdown	-17,60%
